To Whom It May Concern,

I am writing to provide a reference for HS Ultra and their ozone treatment technology used at our pet food production facility. We have utilized HS Ultra's ozone treatment systems to effectively eliminate Salmonella contamination in our processing environment.

The application of their ozone-based solution has been highly successful in improving the safety of our products. Ozone is an effective disinfectant, and, through HS Ultra's expertise, we have seen a significant reduction in microbial presence, including Salmonella. Their team was instrumental in implementing this solution, ensuring it met all necessary safety and compliance standards. HS Ultra team demonstrated technical expertise and great urgency addressing an urgent need at one of our facilities.

I highly recommend HS Ultra's ozone treatment for any facility looking to enhance food safety and eliminate harmful pathogens like Salmonella.

Sincerely,
Mike Rothwell
